Participation in sports is an important part of a student's education. It helps keep them physically active and healthy. When students engage in sports, they learn valuable life skills like teamwork, leadership, and time management. These skills are transferable and hold great significance in various aspects of life beyond the playing field. Additionally, being part of a sports team creates a sense of belonging and community. It brings students together towards a common goal, which can strengthen their friendships and reduce feelings of loneliness.

However, it's important to remember that not every student may enjoy or excel in traditional sports. It's essential for schools to offer a variety of options to cater to different interests and abilities. Some students may have other interests that require their time and attention. Forcing them into sports could lead to stress and hinder their academic performance. Ultimately, the goal should be to implant a lifelong appreciation for sports rather than imposing it as an obligation. By doing so, educational institutions can contribute to the holistic development of their students, both in body and mind.

Floods in Pakistan are primarily triggered by heavy monsoon rains, glacier melt, and overflow of rivers. One of the leading causes of floods is the annual monsoon season. The excessive and sustained rainfall during this period leads to a flow in river levels, often breaching embankments and flooding nearby areas. Additionally, the rapid melting of glaciers in the northern regions contributes to the swelling of rivers, worsening the flood situation.

The consequences of floods are far-reaching. Lives are lost, homes are destroyed, and agricultural land is rendered barren due to the mud and debris left behind. The displacement of communities disrupts livelihoods and strains already limited resources. Furthermore, the outcome of floods gives rise to waterborne diseases and food shortages, worsening the suffering of affected populations.

The Pakistani government along with various non-governmental organisations, has taken measures to address the issue. Early warning systems have been implemented to alert communities in advance, allowing for timely emptying the area.

In conclusion, floods in Pakistan remain a significant challenge, but concerted efforts can help lessen the suffering caused by this natural disaster. Through proactive measures and regional collaboration, the nation can build resilience and protect its communities from the devastating effects of floods.

Writing:

Write three to four paragraphs on the topic, 'Health benefits of Morning Walk'. Remember to use the given checklist.

Morning walks are really good for our health and you don't need anything special to do them. When we walk, our muscles move, our heart beats a bit faster, and our lungs work harder to give us air. This makes our muscles and bones stronger and helps our heart stay healthy. It's like a gentle exercise for our whole body.

Walking in the morning makes us feel happier. The fresh air and sunlight make a special chemical in our brain called serotonin, which makes us feel good and less worried or sad. Many people feel more awake and readier to face the day after a brisk walk.

It can also help with keeping a healthy weight. It helps us burn calories, which can help us lose weight or keep it at a good level when we eat balanced meals. It can also help our body digest food better and control our hunger.

Lastly, morning walks are a nice way to spend time with others. We often see people walking together with friends, family, or even their pets. It's also a peaceful time to think, relax, and enjoy nature.
